

Biotin-Ahx-H2B(106-125) K120Ub (human sequence, synthetic)

UbiQ code : UbiQ-150
Batch # : B01112013-001
Amount : 50 ug, lyophilized powder
Purity : $\geq 95\%$ by RP-HPLC
Mol. Weight : 10.99 kDa
Storage : upon arrival, powder at -20°C ; solution at -80°C . Protect from light and avoid multiple freeze/thaw cycles.

Productsheet

Background. UbiQ-150 is based on an H2B(106-125) peptide which is modified at K120 via a native isopeptide bond with ubiquitin (Ub) and modified on the N-terminus with biotin. An aminohexanoic acid (Ahx) linker is used to create extra space between the biotin and H2A peptide for efficient access of biotin binding entities. It can be used as a substrate for ubiquitin proteases, to investigate mechanism of binding and recognition by proteins that contain ubiquitin-associated domains or ubiquitin-interacting motifs (UIMs) and as antigen for immunizations.

Figure 1. LC-MS analysis. Mobile phase A = 1% CH_3CN , 0.1% formic acid in water (milliQ) and B = 1% water (milliQ) and 0.1% formic acid in CH_3CN . Phenomenex Kinetex C18, (2.1 \times 50 mm, 2.6 μM); flow rate = 0.5 mL/min, runtime = 6 min, column T = 40°C . Gradient: 5-95% over 3.5 min.

important: sample preparation

- dissolve the powder in as little DMSO as possible (e.g. 20 - 40 mg/mL)
- add the DMSO stock slowly to milliQ (please note the order of addition)
- buffer the aq. solution as desired
