

UbiQ

targeting the ubiquitin system

K29 Di-Ubiquitin VME (*human sequence, synthetic*)

UbiQ code : UbiQ-084

Batch # : B15012015-001

Amount : 25 ug, lyophilized powder

Purity : $\pm 90\%$ *

Mol. Weight : 17.11 kDa

Storage : upon arrival, powder at -20°C ; solution at -80°C . Please avoid multiple freeze/thaw cycles.

Productsheet

Background. UbiQ-084 is an activity-based probe for deubiquitinating enzymes (DUBs) based on K29 linked diUb. Here Ly29 has been replaced by a diaminobutyric acid residue equipped with a VME type warhead - the Dab(VME) type of structure is a DUB reactive mimic of the native isopeptidic linked Lys(Gly) residue (Figure 1). DUB activity-based probes can be used for activity profiling experiments and structural studies. Please note that the native distance between the proximal and distal Ub is preserved as much as possible in UbiQ-084.

Figure 1. Mode of action diUb VME labeling of DUBs. Top= native diUb, bottom= diUb VME probe.

* Based on SDS-PAGE analysis there is some Ub(1-75) present in the sample but this does not interfere with labeling experiments with DUBs.

important: sample preparation

- dissolve the powder in as little DMSO as possible (e.g., 20 mg/mL)
- add this DMSO stock slowly to milliQ (please note the order of addition) and mix by vortexing
- buffer the aq. stock as desired
- For more details see (open-access) reference 1: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4159580/>
