## Productsheet

**Background.** UbiQ-034 is a native K63 linked di-ubiquitin which can be used as a substrate for proteases that cleave the isopeptide linkage between two ubiquitin molecules. It can also be used to investigate mechanism of binding and recognition by proteins that contain ubiquitin-associated domains or ubiquitin-interacting motifs (UIMs).

### important: sample preparation

- add (for example) 50 µL DMSO to 1.00 mg di-ubiquitin and dissolve by a quick spin
- add the DMSO stock (20 mg/mL = 1169 µM) to milliQ (please note order of addition).
- buffer the aq. solution as desired
- *as an example*, dilution of the 50 µL DMSO stock into 1.85 mL milliQ followed by addition of 100 µL 1M HEPES affords a stock of ½ mg/mL (29 µM) in 50 mM HEPES, ±2.5 vol% DMSO.
