Productsheet

Background. UbiQ-332 is based on an H2B(113-125) peptide which is modified at K120 via a native isopeptide bond with ubiquitin (Ub); modified on the N-terminus with a PKA (cAMP-dependent Protein Kinase) sequence: LRRASLG; a Gly-Gly linker is used to create extra space between the PKA and H2B peptide sequence. It can be used as a substrate for ubiquitin proteases, to investigate mechanism of binding and recognition by proteins that contain ubiquitin-associated domains or ubiquitin-interacting motifs (UIMs) and as antigen for immunizations.

important: sample preparation

- dissolve the powder in as little DMSO as possible, e.g. 21.6 – 43.2 mg/mL (2.00 – 4.00 mM)
- add this DMSO stock slowly to milliQ (please note the order of addition)
- buffer the aq. solution as desired
